

Zomato Data Storytelling Dashboard - Project Instructions

This document provides step-by-step instructions for running, using, and presenting the Zomato Data Storytelling Dashboard project. The dashboard analyzes Zomato restaurant data and presents insights through interactive visualizations.

1. Project Overview

The dashboard helps users explore restaurant ratings, cuisines, locations, costs, votes, and other business insights through interactive charts and filters.

2. Technologies Used

Python, Streamlit, Pandas, Plotly, NumPy, and Zomato Dataset.

3. Folder Structure

Place app.py and the Zomato dataset file in the same project folder before execution.

4. Installation Steps

Install Python. Open VS Code terminal and run: `pip install streamlit pandas plotly numpy`

5. Running the Application

Open the terminal, navigate to the project folder, and execute: `streamlit run app.py`

6. Dashboard Features

Interactive filters, restaurant analysis, city-wise insights, cuisine analysis, rating distribution, cost analysis, and storytelling visualizations.

7. User Guide

Select filters from the sidebar. Visualizations automatically update based on user selections.

8. Storytelling Insights

Identify popular cuisines, highly rated restaurants, expensive locations, and customer preferences using charts and graphs.

9. Expected Output

The dashboard opens in a web browser and displays interactive visualizations with filtering options.

10. Project Presentation Tips

Explain the dataset, data cleaning process, visualizations, business insights, and conclusions obtained from the dashboard.

11. Troubleshooting

If the dashboard shows a blank page, verify dataset path, refresh the browser, and check the terminal for errors.

12. Conclusion

The Zomato Data Storytelling Dashboard converts raw restaurant data into meaningful business insights using interactive analytics.
