

Zomato Data Storytelling Dashboard - README

PROJECT OVERVIEW

This project is a Streamlit-based data storytelling dashboard built using the Zomato dataset. It provides insights into restaurant trends, ratings, costs, locations, and online ordering behavior.

FEATURES

- Dataset preview and cleaning
- Key performance metrics (KPIs)
- Restaurant type analysis
- Rating distribution
- Cost analysis
- Location insights
- Online order and table booking analysis
- Business insights and recommendations

TECHNOLOGIES USED

Python, Pandas, Plotly, Streamlit, Pyngrok

DATASET

The dataset includes restaurant details such as name, location, rating, cost for two people, restaurant type, online order availability, and table booking availability.

HOW TO RUN (LOCAL)

1. Install requirements: `pip install streamlit pandas plotly`
2. Run app: `streamlit run app.py`

HOW TO RUN (COLAB)

1. Upload dataset
2. Run Streamlit with ngrok
3. Open generated public URL

INSIGHTS

- Most restaurants are located in major cities
- Mid-range restaurants dominate the market
- Online ordering is widely available
- Ratings mostly range between 3.0 and 4.5
- Table booking is less common

CONCLUSION

This dashboard helps analyze customer behavior and restaurant performance to support better business decisions.
